214information payload capacity
112interactive service
217interface bit rate
215interface overhead
216interface payload
217interface rate
218labelled channel
219labelled deterministic channel
220labelled interface structure
221labelled multiplexing
222labelled statistical channel
223logical signalling channel
113messaging service
114mixed document
115multipoint
224network node interface
224NNI
225packet
226packet transfer mode
227payload module
228periodic frame
229physical frame
230physical signalling channel
231positioned channel
232positioned interface structure
116post-production processing
117retrieval service
233self-delineating block
234self-delineating labelled interface
118sound retrieval service
235statistical
237STM
236synchronous time division multiplexing
237synchronous transfer mode
238throughput
239transfer mode
240transit delay
119videomessaging
241virtual circuit
101wideband (deprecated)

ANNEX A

(to Recommendation I.113)

Alphabetical list of terms contained in this Recommendation[1]

201asynchronous time-division multiplexing
202asynchronous transfer mode
202ATM
209ATM deterministic transfer mode
235ATM statistical transfer mode
203block
212block header
204block payload
101broadband
205broadband access
206broadband communication channel
102broadcast
207cell
208circuit transfer mode
103connectionless service
104contribution
104contribution application
105conversational service
209deterministic
106distribution
106distribution application
107distribution service
108distribution service with user individual presentation control
109distribution service without user individual presentation control
110enhanced-quality television
111existing-quality television
210frame
211framed interface
212header

[1] The number against a term indicates its location in the vocabulary.
