6.Proposed amendment to Recommendation M.720

NETWORK ANALYSIS POINT

The following text is proposed to replace the part of Recommendation M.720 starting after the first sentence of the second paragraph of section 1 to the end of the section:

"It analyzes all relevant information to investigate the problems involved. The general considerations for checking the quality of the international telephone service are given in Recommendation E.420.

The network analysis point may request the fault report point (network) to initiate investigatory and/or remedial actions in one or more maintenance centres in the home country or via a fault report point (network) in another country. It acts as a single point of contact for general enquiries concerning the day-to-day maintenance of the international telephone network, as may be made by the maintenance organizations of other administrations."
