MISP PROJECT

**MISP**  
**Threat Sharing**

# CONTENT OF THE PRESENTATION

- Data sharing in MISP
- Data models for the Data layer
- Data models for the Context layer

# LAYERS OF DATA MODEL

## ■ Data layer

- ▶ The raw data itself as well as element to link them together
- ▶ Indicators, Observables and means to contextually link them
- ▶ MISP terminology: Event, Attributes, misp-objects, ...

## ■ Context layer

- ▶ As important as the data layer, allow triage, false-positive management, risk-assessment and prioritisation
- ▶ Latches on the data layer, usually referencing threat intelligence, concepts, knowledge base and vocabularies
- ▶ Tags, Taxonomies, Galaxies, ...

# **DATA SHARING IN MISP**

# SHARING IN MISP: DISTRIBUTION

MISP offers granular distribution settings:

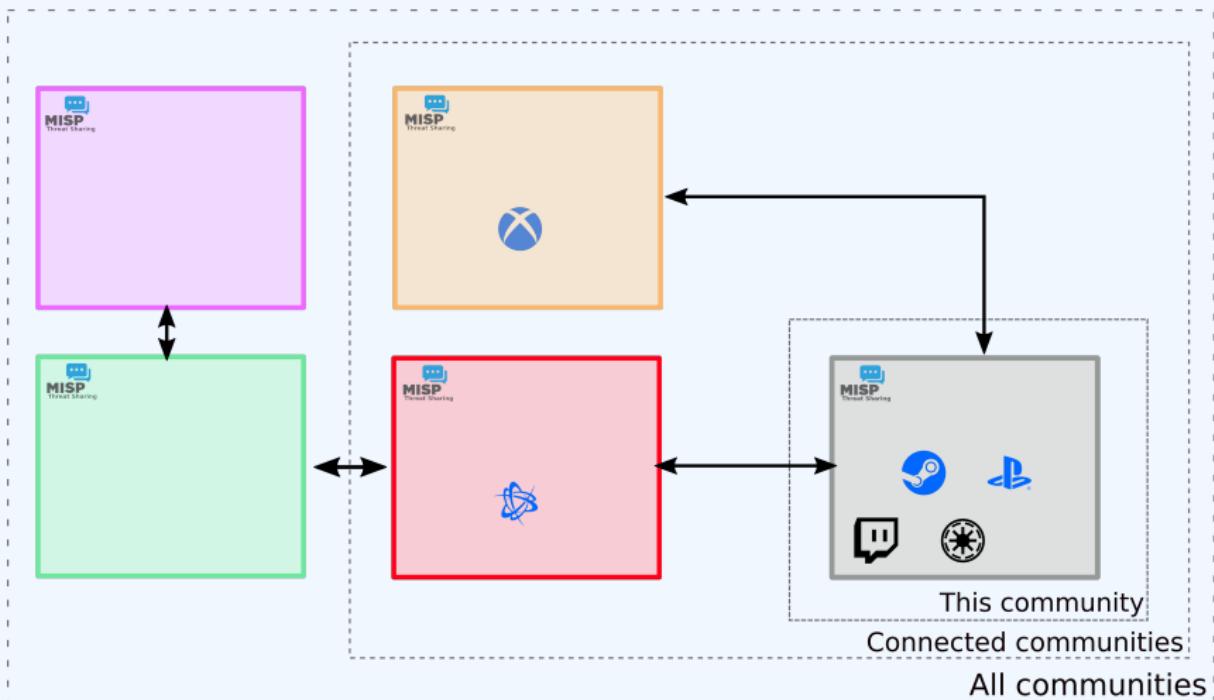

- Organisation only
- This community
- Connected communities
- All communities
- Distribution lists - aka **Sharing groups**

# SHARING IN MISP: DISTRIBUTION

Sharing group

# **DATA LAYER**

# DATA LAYER: NAMING CONVENTIONS

- Data layer
  - ▶ **Events** are encapsulations for contextually linked information
  - ▶ **Attributes** are individual data points, which can be indicators or supporting data.
  - ▶ **Objects** are custom templated Attribute compositions
  - ▶ **Object references** are the relationships between individual building blocks
  - ▶ **Shadow Attributes/Proposal** are suggestions made by users to modify an existing *attribute*
  - ▶ **Sightings** are a means to convey that a data point has been seen
  - ▶ **Event reports** are supporting materials for analysts to describe *events, processes, etc*

# DATA LAYER: EVENTS

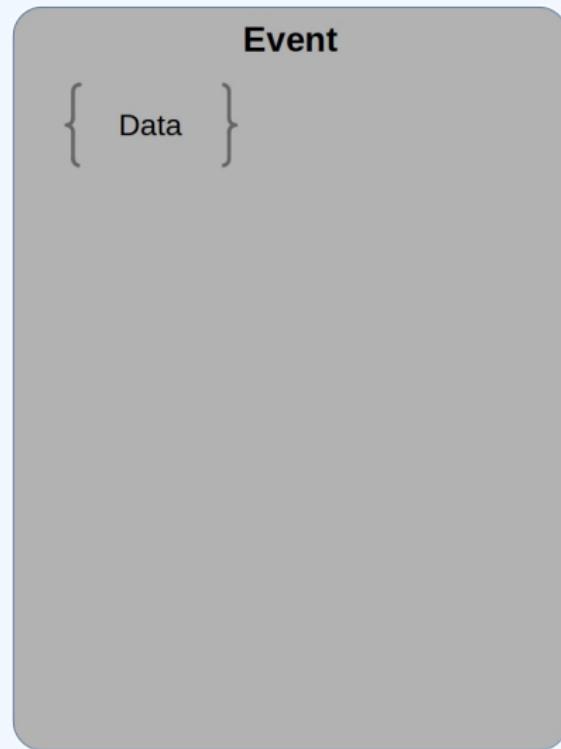

**Events** are encapsulations for contextually linked information

**Purpose:** Group datapoints and context together. Acting as an envelop, it allows setting distribution and sharing rules for itself and its children.

**Usecase:** Encode incidents / events / reports / ...

# DATA LAYER: EVENT BUILDING BLOCKS - CONTEXT

# DATA LAYER: SIGHTINGS

**Sightings** are a means to convey that a data point has been seen

**Purpose:** Allows to add temporality to the data.

**Usecase:** Record activity or occurrence, perform IoC expiration, ...

The screenshot shows a user interface for managing sightings. At the top, there's a header 'Events' with a dropdown menu. Below it is a table with three rows. Each row contains a checkbox (marked with a checkmark), a status 'No', and a 'Sightings' button. The first two rows have a 'No' status, while the third has an 'Inherit' status. To the right of the table is a legend with three colored dots: red, green, and yellow, with the text '(0/0/0)' below it. A tooltip is displayed over the second row, showing 'Sightings CIRCL: 2 (2017-03-19 16:17:59)' and '(2/0/0)'.

```

6     "type": "O",  
7     "attribute_uuid": "5da97b59-9650-4be2-9443-2194a5e38e14"  
8 }
```

# DATA LAYER: EVENT REPORTS

**Event reports** are supporting data for analysis to describe events, processes, etc

**Purpose:** Supporting data point to describe events or processes

**Usecase:** Encode reports, provide more information about the Event, ...

The screenshot shows a web-based event report interface. At the top, it says "Event report: Winnti Group targeting universities in Hong Kong". Below that are three buttons: "Markdown", "Raw", and "Edit report". A note below the buttons states: "This report is an excerpt meant for demo purposes. The full report can be found online at [link: https://www.weilivesecurity.com/2...]".

## Winnti Group targeting universities in Hong Kong

In November 2019, we discovered a new campaign run by the Winnti Group [A threat actor is listed] against two Hong Kong universities. We found a new variant of the ShadowPad backdoor [malpedia is ShadowPad], the group's flagship backdoor, deployed using a new launcher and embedding numerous modules. The Winnti malware was also found at these universities a few weeks prior to ShadowPad.

### ShadowPad found at several Hong Kong universities

In November 2019, ESET's machine-learning engine, Augur, detected a malicious and unique sample present on multiple computers belonging to two Hong Kong universities where the Winnti malware had already been found at the end of October. The suspicious sample detected by Augur is actually a new 32-bit ShadowPad launcher. Samples from both ShadowPad and Winnti found at these universities contain campaign identifiers and C&C URLs with the names of the universities, which indicates a targeted attack.

In addition to the two compromised universities, thanks to the C&C URL format used by the attackers we have reasons to think that at least three additional Hong Kong universities may have been compromised using these same ShadowPad and Winnti variants.

#### DLL side-loading

The launcher is a 32-bit DLL named `hpghostv.dll`, which is the name of a legitimate DLL loaded by `filename: %WINDIR%\temp\hpghostv.exe`. This executable is from HP and is usually installed with their printing and scanning software called HP Digital Imaging. In this case the legitimate `filename: %WINDIR%\temp\hpghostv.exe`, was dropped by the attackers, along with their malicious `filename: %WINDIR%\temp\hpghostv.dll`, in `C:\Windows\Temp`.

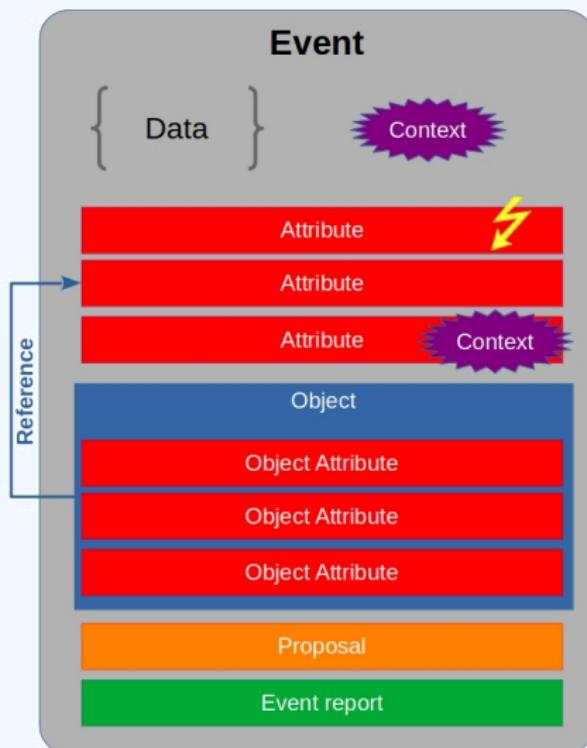

When the malicious DLL is loaded at `hpghostv.exe` stamp, its `DllMain` function is called that will check its parent process for the following sequence of bytes at offset `0x16BA`:

```
85 C0 ; test eax, eax  
8F 64 ; j2
```

In the case where the parent process is `filename: %WINDIR%\temp\hpghostv.exe`, this sequence of bytes is present at this exact location and the malicious DLL will proceed to patch the parent process in memory.

Cancel

# EXPRESSING RELATION BETWEEN CLUSTERS

- Cluster can be related to one or more clusters using default relationships from MISP objects and a list of tags to classify the relation.

```
1   "related": [
2     {
3       "dest-uuid": "5ce5392a-3a6c-4e07-9df3-9b6a9159ac45",
4       "tags": [
5         "estimative-language:likelihood-probability=\\\"likely\\\"",
6         ],
7         "type": "similar"
8       }
9     ],
10    "uuid": "oca45163-e223-4167-b1af-fo88ed14a93d",
11    "value": "Putter Panda"
```
